

The data collection service is used from a client application to collect data from patients in experiments.

Perform the following tasks on this software:

1. Clone the source code from gitlab into your environment
<https://gitlab.fhnw.ch/david.herzig/backendservice>
2. Use Postman to do some basic tests
3. Use Pylint and perform all necessary action to get a score of > 4.0
4. Embed a code checker into your development environment (IDE, e.g. VSCODE, PyCharm)
5. Execute performance tests
6. Extend the code with a log file
7. Extend the code with an assertion
8. Extend the code with an unit test
9. Commit your code to git and create a tag
