

Programming Task - Data Collection App

- ▶ Clone the source code to your environment
<https://gitlab.fhnw.ch/david.herzig/sensordatacollectorapp>
- ▶ Build the software with Gradle (JDK 17)

```
gradle clean  
gradle assembleDebug
```

The APK file is located in `app/build/outputs/apk/debug`

- ▶ Install the APK file on your device
- ▶ Start the app

Tasks:

1. Select a set of sensors and start the data collection process
2. Upload the data to the data collection service
3. Store the data into a JSON file
4. Do some basic analysis with the data by using R or Jupyter Notebook
